

NETFLIX

Netflix : Visualization and Recommendation System

Andi Anugrah Mahyuddin

NETFLIX IS A STREAMING SERVICE THAT OFFERS A WIDE VARIETY OF AWARD-WINNING TV SHOWS, MOVIES, ANIME, DOCUMENTARIES, AND MORE ON THOUSANDS OF INTERNET-CONNECTED DEVICES.

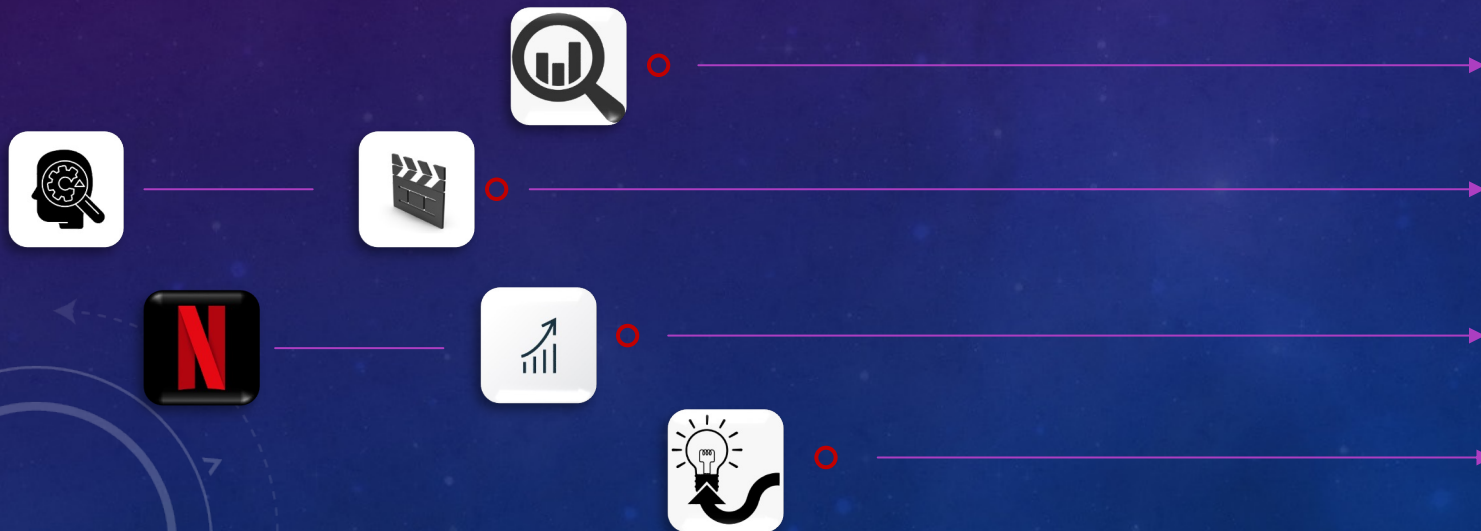

Problem Statement

This dataset consists of tv shows and movies available on Netflix as of 2019. The dataset is collected from Flixable which is a third-party Netflix search engine.

In 2018, they released an interesting report which shows that the number of TV shows on Netflix has nearly tripled since 2010. The streaming service's number of movies has decreased by more than 2,000 titles since 2010, while its number of TV shows has nearly tripled. It will be interesting to explore what all other insights can be obtained from the same dataset.

**This project
required to do :**

- 1.Exploratory Data Analysis
- 2.Understanding what type content is available in different countries
- 3.Is Netflix has increasingly focusing on TV rather than movies in recent years.
- 4.Recomendation System

DATA PREPROCESSING

The background is a deep blue gradient with a subtle pattern of white stars and light blue nebulae. Overlaid on this are several faint, white, circular and semi-circular lines, some of which have arrows indicating a clockwise direction. These lines are scattered across the slide, with a prominent one in the top right corner and others in the bottom left and bottom right.

RECOMMENDATION SYSTEM MODEL

CONTENT BASED FILTERING

TF-IDF(Term Frequency-Inverse
Document Frequency)

$$TF = \frac{\text{number of times the term appears in the document}}{\text{total number of terms in the document}}$$

$$IDF = \log\left(\frac{\text{number of the documents in the corpus}}{\text{number of documents in the corpus contain the term}}\right)$$

$$TF-IDF = TF * IDF$$

Cosine Similarity

The cosine similarity method is a method for calculating the similarity between two objects expressed in two vectors by using keywords from a document as a measure.
